10 November 1949

Chief, Communications Division

"Electrowriter" Equipment

1. With reference to your memorandum dated 20 October 1949, the Engineering Section is procuring two each 500 watt rotary inverters to provide a source of power for testing communications equipment in aircraft. These units enable a 28 volt aircraft system to provide 110 volt 60 cycle power.

2. Since Communications Division has various other projects which are to require such testing and the initial expense is minor, no funds transfer will be necessary at this time.
